Fire Safety Guide

Fire Safety Guide for Your Sauna

At Hotbox Sauna Co., your safety comes first. Our saunas are designed to be easy to use and safe when handled correctly. Please take a few minutes to read this guide before firing up the stove.

Before You Light the Stove

- **Check your surroundings: Place the sauna on a flat, stable surface, away from dry grass, overhanging trees, tents, or flammable materials.**
- **Ventilation: Make sure the chimney is attached securely and the airflow is clear.**
- **Water & Safety Gear: Keep a full water bucket outside the sauna and a fire extinguisher or fire blanket nearby.**
- **No accelerants: Never use petrol, lighter fluid, or gas to light the stove. Only kindling and matches/firelighters are safe.**

Lighting & Operating the Stove

- **Use dry wood only: Wet or treated wood creates excessive smoke and sparks.**
- **Small fires are safe fires: Start with kindling and gradually add logs. Avoid overloading the stove.**
- **Chimney hot!: The stove and chimney get extremely hot. Keep hands, towels, and clothing clear.**
- **Door control: Always close the stove door securely once logs are inside.**

After Your Sauna

- **Let the fire burn down naturally—do not douse with water inside the stove.**
- **Ensure all embers are out before leaving the sauna unattended.**
- **Dispose of ashes only when cold, in a metal container.**

What NOT to Do

- **Do not leave the stove unattended while burning.**
- **Do not cook food or hang clothing over the stove or chimney.**
- **Do not use aerosols, alcohol, or sprays near open flames.**
- **Do not allow children to light or feed the stove.**

In Case of Emergency

- **If smoke fills the sauna, open the door immediately and step outside.**
- **Use the water bucket or fire extinguisher if the fire spreads outside the stove.**
- **If the fire is uncontrollable, call 999 (UK emergency services) and move people to safety.**

Quick Safety Reminders

- **Always supervise the sauna when in use.**
- **Keep flammable items outside the sauna.**
- **Respect the heat—both stove and stones will remain hot long after the fire dies down.**
